Hello Shayne,

We don't really have a mechanism as an organization to issue rights-of-entry to people who have not applied to DNR. We can notify people that they need to secure an authorization in order to proceed. We could probably include proposed conditions on the right-of-entry in our notification letter. If we were to send such a letter, it would be advisable to cc EPA and WDFW.

Lindie,

It sounds like this is one of those projects that slips through the regulatory cracks. It has support to be completed. It is up to us to condition use authorization to ensure that operation does not contribute to metals contamination at the site.

I have not yet heard back from Kathy from EPA so will again attempt to contact tomorrow. In meantime I recommend drafting ROE with BMPs mentioned in my previous email so that we can present something to EPA to consider before moving forward with proponent. I would be interested to hear what other BMPs you are considering. I would be glad to review if you would like.

Will let you know when I hear something back from EPA.

Shayne

I looked through the JARPA and I talked to Chris Waldbillig (WDFW) about coatings and containment. He said the metal tanks have no coating/paint and WDFW will condition the HPA they issue for containment of cutting materials. Cutting should be done above the water line. This covers any concerns of DOE Water Quality Program.

I talked to Rebecca Padgett and Joe Burcar in DOE Shoreline & Environmental Assessment Program (SEA). Shorelands permits are a local determination and C. Waldbillig said local governments involved have made their determination. No 401 certification is needed because no federal permits are required. That rules out any permits related to SEA program here.

We have no permits to issue for this proposal.

Please call or write if I can help with anything. Thank you

Hello Greg,

This is the pontoon removal project in Bremerton. I wanted to know if this needs an Ecology permit. Thanks for your feedback.

Lindie,

Attached is the JARPA that Paul submitted. I'm wondering if it would not be better to cut the scrap in place, capturing the debris of course, then remove the pieces in ¼'s on a barge.

Let me know what you think, thanks.
